Notes:

1. Solve all the above problems before you go to mock exam or official board exam
2. Capacitors and circular motion in old syllabus are not included in the new syllabus
3. Projectile with angle is not included in the new syllabus
4. Collision cases are all in one dimension, all cases are required
5. Pay attention to kinetic model, heat pump/engine and deep inelastic scattering for propping protons and neutrons.
6. The mock exam is comprehensive that covers all the topics in the syllabus
7. Pay attention to application on principle of moments for parallel and non-parallel forces
8. Pay attention to radioactivity and to the use of $\ln(x)$ function
